## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-3, drawn to a radio transmission device, classified in class 709, subclass 221.
  - II. Claim 4, drawn to a network server, classified in class 709, subclass 221.
  - III. Claim 5-13, drawn to an appliance and control of the appliance, classified in class 709, subclass 221.
  
2. Inventions I, II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the transmission device can transmit URLs without the use of a server and appliance. The subcombination has separate utility such as a server can be used within multiple systems for various reasons and an appliance can be anything and have many uses in various systems.

Art Unit: 2141

3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II and III, restriction for examination purposes as indicated is proper.

4. A telephone call was made to and message left with Gregory L. Thorne on September 2, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
